

1 ABSTRACT OF THE DISCLOSURE

2 An adjustable mount for use with a snowboard and a
3 snowboard binding has a center-line and a channel which
4 longitudinally extends along the center-line of the
5 snowboard. The snowboard binding includes a binding base
6 plate and a disc. The disc has a center-line and a bottom
7 surface and is rotatably coupled to the binding base plate.
8 The adjustable mount includes a rail and a locking
9 mechanism. The rail is disposed in the channel and is
10 fixedly coupled thereto. The rail is a flexible member and
11 has a key-slot and two series of parallel notches. The
12 binding base plate is disposed on the snowboard. The disc
13 has a center-line and a bottom surface. The disc is
14 rotatably coupled to the binding base plate. The locking
15 mechanism securely couples the rail to the binding base
16 plate.
